# 1 Data Structure Index

## 1.1 Data Structures

Here are the data structures with brief descriptions:

### [\\_grainmaker\\_tilde](#)

A structure for a grainmaker~ object

2

### [grain](#)

The struct of a grain

6

### [grain\\_scheduler](#)

A structure for a gain\_scheduler object

7

## 2 File Index

### 2.1 File List

Here is a list of all documented files with brief descriptions:

### [grain.h](#)

Object to handle the individual grains of the `grainmaker~` object.

Grain includes the methods to initialize and construct individual grains.

11

### [grain\\_scheduler.h](#)

Object to handle the creation, deletion and scheduling of grains

Grain\_scheduler manages all grains for the `grainmaker~.c` pd external. It constructs grains, sets the time between grains, and computes the output.

11

## 3 Data Structure Documentation

### 3.1 `_grainmaker_tilde` Struct Reference

A structure for a `grainmaker~` object

Collaboration diagram for `_grainmaker_tilde`:

#### Data Fields

- `t_object x_obj`
- `t_word * x_sample`
- `int x_sample_length`
- `int offset`
- `int num_grains`
- `int grain_length`
- `t_symbol * x_arrayname`
- `t_float f`
- [grain\\_scheduler](#) \* `x_scheduler`
- `t_inlet * in_offset`
- `t_inlet * in_num_grains`
- `t_inlet * in_grain_length`
- `t_outlet * out`

#### Related Functions

(Note that these are not member functions.)

- `void * grainmaker\_tilde\_new (t_symbol *arrayname)`  
*Creates new grainmaker object*
- `void grainmaker\_tilde\_free (t_grainmaker_tilde *x)`  
*Frees grainmaker object*

- static `t_int *` `grainmaker_tilde_perform` (`t_int *w`)  
*Performs grainmaker tilde*
- static void `grainmaker_tilde_set` (`t_grainmaker_tilde *x`)  
*Sets the array to read from*
- static void `grainmaker_tilde_dsp` (`t_grainmaker_tilde *x`, `t_signal **sp`)  
*Sets up the grainmaker tilde for use as a dsp*
- static void `grainmaker_tilde_set_offset` (`t_grainmaker_tilde *x`, `t_floatarg f`)  
*Reacts to inlet changes of offset*
- static void `grainmaker_tilde_set_num_grains` (`t_grainmaker_tilde *x`, `t_floatarg f`)  
*Reacts to inlet changes of num\_grains*
- static void `grainmaker_tilde_set_grain_length` (`t_grainmaker_tilde *x`, `t_floatarg f`)  
*Reacts to inlet changes of grain\_length*
- void `grainmaker_tilde_setup` (void)  
*Sets up grainmaker as a pd external*

### 3.1.1 Detailed Description

A structure for a grainmaker~ object

### 3.1.2 Friends And Related Function Documentation

**3.1.2.1 `grainmaker_tilde_dsp()`** static void `grainmaker_tilde_dsp` (  
`t_grainmaker_tilde * x`,  
`t_signal ** sp` ) [related]

Sets up the grainmaker tilde for use as a dsp

#### Parameters

<code>x</code>	grainmaker tilde object
<code>sp</code>	the input signal vector

**3.1.2.2 `grainmaker_tilde_free()`** void `grainmaker_tilde_free` (  
`t_grainmaker_tilde * x` ) [related]

Frees grainmaker object

#### Parameters

<i>x</i>	grainmaker object Free the grainmaker object
----------	---

**3.1.2.3 grainmaker\_tilde\_new()** `void * grainmaker_tilde_new (`  
`t_symbol * arrayname ) [related]`

Creates new grainmaker object

#### Parameters

<i>arrayname</i>	Name of the provided array used as a source sample Create new grainmaker_tilde object
------------------	--

#### Returns

Pointer to grainmaker object

**3.1.2.4 grainmaker\_tilde\_perform()** `static t_int * grainmaker_tilde_perform (`  
`t_int * w ) [related]`

Performs grainmaker tilde

#### Parameters

<i>w</i>	signal input Performs grainmaker tilde
----------	---

#### Returns

returns output signal

**3.1.2.5 `grainmaker_tilde_set()`** `static void grainmaker_tilde_set (`  
`t_grainmaker_tilde * x )` [related]

Sets the array to read from

#### Parameters

<i>x</i>	grainmaker tilde object Sets the array to use as a sample
----------	--

**3.1.2.6 `grainmaker_tilde_set_grain_length()`** `static void grainmaker_tilde_set_grain_length (`  
`t_grainmaker_tilde * x,`  
`t_floatarg f )` [related]

Reacts to inlet changes of `grain_length`

#### Parameters

<i>x</i>	grainmaker tilde object
<i>f</i>	new value of <code>grain_length</code>

**3.1.2.7 `grainmaker_tilde_set_num_grains()`** `static void grainmaker_tilde_set_num_grains (`  
`t_grainmaker_tilde * x,`  
`t_floatarg f )` [related]

Reacts to inlet changes of `num_grains`

#### Parameters

<i>x</i>	grainmaker tilde object
<i>f</i>	new value of <code>num_grains</code>

**3.1.2.8 `grainmaker_tilde_set_offset()`** `static void grainmaker_tilde_set_offset (`  
`t_grainmaker_tilde * x,`  
`t_floatarg f )` [related]

Reacts to inlet changes of `offset`

**Parameters**

<i>x</i>	grainmaker tilde object
<i>f</i>	new value of offset

The documentation for this struct was generated from the following file:

- `grainmaker~.c`

## 3.2 grain Struct Reference

The struct of a grain

```
#include <grain.h>
```

**Data Fields**

- int [start\\_sample](#)
- int [end\\_sample](#)
- int [current\\_sample](#)
- int [grain\\_size](#)

**Related Functions**

(Note that these are not member functions.)

- [grain\\_construct\\_grain](#) (int sample\_pos, int src\_sample\_length, int offset, int grain\_length)  
*Creates a grain to be used by [grain\\_scheduler](#)*

### 3.2.1 Detailed Description

The struct of a grain

### 3.2.2 Friends And Related Function Documentation

**3.2.2.1 construct\_grain()** `grain` construct\_grain (  
    int sample\_pos,  
    int src\_sample\_length,  
    int offset,  
    int grain\_length ) [related]

Creates a grain to be used by [grain\\_scheduler](#)

## Parameters

<i>sample_pos</i>	The position of the playhead as defined from outside.
<i>src_sample_length</i>	The length of the source sample @param offset The offset around sample_pos in which grains can be constructed
<i>grain_length</i>	The length of the individual grains The construct_grain function creates grains in an area of the source sample that is defined by sample_pos and offset. It sets all grain variables.

## Returns

A grain object

## 3.2.3 Field Documentation

**3.2.3.1 current\_sample** `int grain::current_sample`

The position in the source sample where the grain is currently playing

**3.2.3.2 end\_sample** `int grain::end_sample`

The position in the source sample where the grain ends

**3.2.3.3 grain\_size** `int grain::grain_size`

The size of the grain, calculated by subtracting start\_sample from end\_sample

**3.2.3.4 start\_sample** `int grain::start_sample`

The position in the source sample where the grain starts

The documentation for this struct was generated from the following file:

- [grain.h](#)

**3.3 grain\_scheduler Struct Reference**

A structure for a gain\_scheduler object

```
#include <grain_scheduler.h>
```

Collaboration diagram for grain\_scheduler:

## Data Fields

- `t_word * src_sample`
- `grain * grains`
- `int * grain_pauses`
- `int src_sample_length`
- `int offset`
- `int num_grains`
- `int current_num_grains`
- `int grain_length`
- `int grain_spread`

## Related Functions

(Note that these are not member functions.)

- `grain_scheduler * grain_scheduler_new` (`t_word *src_sample`, `int src_sample_length`)  
*Creates a new `grain_scheduler` object*  
*This function sets the source sample and its length for the `grain_scheduler` class.*
- `void grain_scheduler_free` (`grain_scheduler *x`)  
*Frees a `grain_scheduler` object*
- `void grain_scheduler_set_props` (`grain_scheduler *x`, `int offset`, `int num_grains`, `int grain_length`)  
*Sets the properties of the `grain_scheduler` object as defined by outside input.*
- `void grain_scheduler_perform` (`grain_scheduler *x`, `int sample_pos`, `t_sample *out`)  
*Performs the grain creation and playback in realtime*

### 3.3.1 Detailed Description

A structure for a `gain_scheduler` object

### 3.3.2 Friends And Related Function Documentation

#### 3.3.2.1 `grain_scheduler_free()`

```
void grain_scheduler_free (  
    grain_scheduler * x )    [related]
```

Frees a `grain_scheduler` object

## Parameters

<i>x</i>	My <a href="#">grain_scheduler</a> object The function frees the allocated memory of a <a href="#">grain_scheduler</a> object.
----------	---

**3.3.2.2 grain\_scheduler\_new()** [grain\\_scheduler](#) \* grain\_scheduler\_new (   
     t\_word \* *src\_sample*,  
     int *src\_sample\_length* ) [related]

Creates a new [grain\\_scheduler](#) object  
 This function sets the source sample and its length for the [grain\\_scheduler](#) class.

## Returns

a pointer to the newly created [grain\\_scheduler](#) object

**3.3.2.3 grain\_scheduler\_perform()** void grain\_scheduler\_perform (   
     [grain\\_scheduler](#) \* *x*,  
     int *sample\_pos*,  
     t\_sample \* *out* ) [related]

Performs the grain creation and playback in realtime

## Parameters

<i>x</i>	My <a href="#">grain_scheduler</a>
<i>sample_pos</i>	The current position of the source sample around which grains are to be created and played back
<i>out</i>	The output vector The function grain_scheduler_perform creates and outputs grains according to user defined properties

**3.3.2.4 grain\_scheduler\_set\_props()** void grain\_scheduler\_set\_props (   
     [grain\\_scheduler](#) \* *x*,  
     int *offset*,  
     int *num\_grains*,  
     int *grain\_length* ) [related]

Sets the properties of the [grain\\_scheduler](#) object as defined by outside input.

## Parameters

<i>x</i>	My <a href="#">grain_scheduler</a> object
<i>offset</i>	The offset in which grains can be created
<i>num_grains</i>	The number of grains which are to be created @param grain_length The length of the grains to be created The function <code>grain_scheduler_set_props</code> sets the parameters for grain creation at the beginning of the <code>perform</code> routine. It creates the array in which grains are stored and constructs grains if it is empty or grain size has been increased since the last time the <code>perform</code> routine was executed.

The documentation for this struct was generated from the following file:

- [grain\\_scheduler.h](#)

## 4 File Documentation

### 4.1 grain.h File Reference

Object to handle the individual grains of the `grainmaker~` object.

Grain includes the methods to initialize and construct individual grains.

This graph shows which files directly or indirectly include this file:

### 4.2 grain\_scheduler.h File Reference

Object to handle the creation, deletion and scheduling of grains

`Grain_scheduler` manages all grains for the `grainmaker~.c` pd external. It constructs grains, sets the time between grains, and computes the output.

```
#include <stdio.h>
#include "m_pd.h"
#include "grain.h"
Include dependency graph for grain_scheduler.h:
```

### Data Structures

- struct [grain\\_scheduler](#)  
*A structure for a gain\_scheduler object*

## Typedefs

- typedef struct [grain\\_scheduler](#) **grain\_scheduler**

### 4.2.1 Detailed Description

Object to handle the creation, deletion and scheduling of grains

Grain\_scheduler manages all grains for the grainmaker~.c pd external. It constructs grains, sets the time between grains, and computes the output.
